

Basic Definitions

1. Define software testing.
 2. What is the primary objective of testing?
 3. Differentiate between verification and validation.
 4. What is a test case?
 5. What is meant by test coverage?
 6. What is the role of test data in software testing?
 7. Define defect in software testing.
 8. What is regression testing?
-

Test Scenarios and Test Cases

9. What is a test scenario?
 10. How are test cases different from test scenarios?
 11. What are the characteristics of a good test case?
 12. What is boundary value testing?
 13. How are test cases prioritized?
 14. Why is traceability important in test cases?
 15. What is exploratory testing?
-

Insights from a Venn Diagram

16. What does a Venn diagram in testing represent?
 17. How are errors, faults, and failures related?
 18. Explain the difference between faults and failures using a Venn diagram.
 19. What does the intersection of errors and faults signify?
-

Identifying Test Cases

- 20. How do you identify test cases from requirements?
 - 21. What is the role of equivalence partitioning in test case identification?
 - 22. Why is it important to identify both positive and negative test cases?
 - 23. How does risk-based testing influence test case identification?
-

Error, Fault, and Failure Taxonomies

- 24. Define an error in the context of software development.
 - 25. What is a fault?
 - 26. What is a failure?
 - 27. How does an error lead to a fault and eventually a failure?
 - 28. Why is understanding fault taxonomy important for testers?
-

Levels of Testing

- 29. What is unit testing, and who performs it?
 - 30. Define integration testing.
 - 31. What is the purpose of system testing?
 - 32. What is user acceptance testing (UAT)?
 - 33. Why is smoke testing performed?
 - 34. What is end-to-end testing?
-

Activities of a Test Engineer

- 35. What are the key responsibilities of a test engineer?
- 36. How does a test engineer prepare test data?
- 37. What are the steps involved in executing a test case?
- 38. How does a test engineer report defects?
- 39. What role does a test engineer play in regression testing?

Test/Debug Life Cycle

- 40. What are the phases of the test life cycle?
- 41. What is defect triaging in the test/debug life cycle?
- 42. How does debugging differ from testing?
- 43. What are the key components of a defect report?
- 44. What is the significance of test closure activities?

Testing Principles

- 45. Why is exhaustive testing considered impractical?
- 46. Explain the "Pesticide Paradox" in testing.
- 47. What does the principle "Testing shows the presence of defects" mean?
- 48. Why is early testing emphasized in software testing?

Testing Throughout the SDLC

- 49. What is the role of testing during the requirements phase?
- 50. How is testing integrated into the maintenance phase of the SDLC?
